

AC•TI•VATE: to set in motion

THE IMPORTANCE OF AN ACTIVATOR

Purpose of an Activator: To provide an optimal sustain when activating your tuning forks, with minimal noise intrusion from the strike.

Material of Activator: Ohm Therapeutics tested the durometer of various materials, to ensure the ideal balance of "hardness" and "give." If the material is too hard, the strike will produce an unpleasant noise and undue wear on the tuning fork, and your hand/wrist. Too soft, and the activation is weak and the sustain of the vibration is compromised.

In Sound Healing, the noise of the "strike" should be as unobtrusive as possible. The material used in the Activator and Practitioner Activator was carefully chosen for its level of firmness, to provide an ideal surface when activating your tuning forks, both weighted and unweighted.

Because a type of rubber is used to achieve the best activation, we chose to go the extra mile and provide a *latex-free material that is virtually odorless*, in consideration of the healing environment in which these tools are used.
